

## FEATURES

### ■ central address book

Allows you to maintain your contact list by easy-to-manage names, rather than difficult-to-remember mobile numbers, through the virtual central address book kept on the central server. The Central Address Book also supports user groups to ensure further ease of use.

### ■ multiple recipients

Takes the hassle away from having to send the same message to a number of different users!

### ■ scheduling

Message broadcast can be set up to execute in a future point in time to allow load balancing and on-time delivery.

### ■ automatic response system

A very powerful feature that enables automated interactive communications by sending dynamic pre-set responses maintained by a simple scripting language and queries. This module also authorized parties to remotely send information to back-office.

### ■ polling

Provides the capability to conduct an SMS-based poll where the system will automatically register any responds and present the result using tables and charts.

### ■ send from any desktop

Mobile messages can be easily broadcast from any desktop with the help of our intuitive graphical user interface.

### ■ multiple database support

Virtual address book, content scripting and automatic response system can integrate to multiple databases. This system can access any ADO and ODBC compliant databases including MS SQL Server, Oracle, Interbase, Sybase, and Informix.

### ■ Integration with automatic alert system

This system can be integrated with Automatic Alert System, enable any alert or report sent via short messages.

### ■ security

All features are securely protected, as only authorized user can gain access. Users are verified based on their user identifications and passwords.

**Corporate SMS Gateway** is a turn-key mobile messaging solution suited for organizations looking to launch a mobile communication channel, or improve an existing one, allowing instantaneous interactive communication among corporates, internal staff, or other parties.

The solution is beyond one-way communications, but sophisticated two-way communications allowing creative and comprehensive interactions to be built on top of our solution.

Corporates can broadcast information to customers and vendors more effectively. Mobile workforce can access corporate-wide information faster and more conveniently.
